

ProstaLund CoreTherm®

Fast and minimally invasive BPH treatment with TURP-like outcome.

Data from 5 year clinical studies* show you cannot find a more effective, minimally invasive treatment for BPH.

ProstaLund CoreTherm® microwave BPH treatment achieves TURP-like efficacy with a unique Feedback Technology, giving Urologists control of patient outcome and satisfaction.

Three-way Feedback – No More “Flying Blind”

ProstaLund patented Feedback Technology uses numerous sensors to precisely monitor heat ablation and prostate temperatures. CoreTherm is the only BPH device that provides full insight into the progress of treatment.

Treatment Tailored to Each Individual Patient and Prostate

Patients are not all the same. Prostates differ in size, in blood flow and how they react to heat. With ProstaLund CoreTherm feedback, Urologists have the ability to adjust the tissue ablation and treatment time based on how the prostate reacts. Most treatments can be completed as quickly as 10–20 minutes, with long lasting results.

TURP-like Results

TURP has long been considered the gold standard, because it effectively removes tissue. CoreTherm does the same; removes tissue and reduces the prostate size needed for lasting and complete treatment.
